HOW TO USE THIS FORMULARY

The Texas Department of State Health Services (DSHS)/Department of Aging and Disability Services (DADS) Drug Formulary is the publication that outlines the medications that have been approved for use in Community Mental Health Centers, Mental Health State Hospitals and the Mental Retardation State School systems. The formulary is published annually in the last quarter of the calendar year. This document is divided into three sections (Alphabetical Listing, Therapeutic Classification/Cost Index, and Alphabetical Index) to facilitate usage.

1. ALPHABETICAL LISTING:
This section lists all the medications alphabetically by generic (nonproprietary) name. Trade (proprietary) names and abbreviations are listed in parenthesis after the generic name. In this section, all approved dosage forms and strengths are also listed.

2. THERAPEUTIC CLASSIFICATION/COST INDEX:
This section groups the medications by therapeutic usage and lists them alphabetically by generic (nonproprietary) name. Medications may be listed in multiple categories. For trade names, consult the alphabetical index. Also in this section is a relative cost index so that medications used in similar situations can be evaluated keeping cost of care in mind. Relative cost is based on cost per day of the average dose. The cost of bulk items is listed per unit.

3. ALPHABETICAL INDEX:
This section lists all the medications alphabetically by trade name, generic name, and abbreviations. Page numbers for each of the listings is provided.
INTRODUCTION

The purpose of the DSHS/DADS Executive Formulary Committee is to maintain and update the Formulary and to recommend standards for drug use within the Community Mental Health Centers, Mental Health State Hospital and the Mental Retardation State School systems. The Committee is concerned with maintaining the highest standards for drug use. To assist the clinician in prescribing the most cost effective agents a Therapeutic Classification with relative cost data is provided. Because of their frequency of use, the highest level of concern and vigilance centers on the psychotropic medications. For the clinician's reference, the Formulary provides tables summarizing the recommended dosage ranges for the psychotropic drugs; however, these guidelines are not intended to replace other references or the clinician's clinical judgment. The clinician is urged to check with other references, including the Department of State Health Services rule governing prescribing of psychoactive medications (Texas Administrative Code, Title 25, Part 1, Chapter 415, Subchapter A), The American Hospital Formulary Service Drug Information, Facts & Comparisons, and The AMA Drug Evaluations among other reliable sources.

This Formulary, is not intended to be a reference for drug use. Rather it is to serve the clinician as a listing of drugs, which are approved for use within the Department. Approval of a drug entity for inclusion in the Formulary does not imply approval of all formulations containing that entity. The Executive Formulary Committee will decide which formulations are approved for use within the department. Not all drugs listed in the Formulary will be stocked at each facility's pharmacy. If a physician, dentist, nurse or pharmacist desires to have a drug added to the Formulary, he or she should complete and submit the appropriate form (New Drug Application, DF-1, see Appendix 1) to the facility's Pharmacy and Therapeutics Committee. If it is approved at the facility level but is not included in the Departmental Formulary, the facility's Director of Pharmacy must then forward the request to the DSHS/DADS Executive Formulary Committee in care of the Texas Department of State Health Services, State Hospital Section. Requests received at least 30 days prior to the quarterly meeting will be considered at that meeting. Requests received less than 30 days before the meeting will not be considered until the following meeting. Clinicians and facilities are encouraged to submit supporting documents with their formulary request. The Executive Formulary Committee will evaluate the submission's appropriateness based upon the efficacy and safety of the proposed drug compared with existing formulary items and cost effectiveness of the new agent. When appropriate, the Executive Formulary committee will add the new drug or replace old agents in the same pharmacological/therapeutic category with the new agent. The DSHS/DADS Formulary and Interim Formulary Updates are available at http://www.dshs.state.tx.us/mhprograms/Formulary.shtm

The DSHS/DADS Formulary consists of routine and reserve drugs. Drugs in the reserve class have specific guidelines for use printed in the Formulary. These guidelines will be used to audit the appropriate use of reserve drugs. Based on the audit results, continuing education will be developed and targeted as needed. The purpose of reserve status is to stimulate thought and promote care in prescribing. Discussions about the use of reserve status drugs with peers are encouraged. Use of reserve status drugs
requires documentation of justification in the patient’s progress notes.

As a means of preventing medication errors, the *Formulary* has incorporated TALL MAN characters to assist in distinguishing look-alike drug names. TALL MAN characters are being implemented in various parts of the pharmaceutical industry in order to prevent medication errors. Even though the *Formulary* may not play a major role in preventing medication errors, hopefully this change will stimulate the awareness of TALL MAN characters and assist in implementing this print style in other areas of our medication use process.

The Texas Department of State Health Services and The Texas Department of Aging and Disability Services utilize a closed formulary system. Only drugs listed in the *Formulary* are to be stocked, prescribed and dispensed in DSHS/DADS facilities including pharmaceutical products recommended by consultants for specialized treatments. When a patient's condition requires a drug not listed in the *Formulary*, limited quantities can be obtained for use in that particular patient. However, documentation (Non-Formulary Drug Justification Form, DF-2, see Appendix 2) should be submitted to the facility Clinical Director and the Office of the Medical Director where it will be reviewed by the Executive Formulary Committee to assure reasonable compliance with the *Formulary*.

When requested by the Commissioner, the Executive Formulary Committee will make other recommendations regarding drug use. If facility clinicians have topics for committee consideration, these requests should be sent to the Chairperson, DSHS/DADS Executive Formulary Committee in care of the Texas Department of State Health Services, State Hospital Section (mail code 2023). The Committee also appreciates your comments concerning the printing of the *Formulary* and Committee deliberations and decisions. To facilitate your involvement, a schedule of the review process has been added to this edition of the *Formulary*. Please feel free to provide input.

PROCEDURE FOR ADDITION OF DRUGS TO THE FORMULARY

A physician, dentist, nurse or pharmacist desiring that a new drug be added to the Formulary should submit a new drug application (Form DF-1) to the facility's formulary committee. If approved, the new drug application should be forwarded to the Executive Formulary Committee. The following information should accompany the application:

1. published articles in the biomedical literature that substantiate the efficacy and safety of the proposed new drug;
2. advantages of the proposed new drug compared with similar therapeutic agents presently in the Formulary;
3. drugs in the Formulary which the proposed agent will replace or supplement;
4. cost effectiveness data.

New drug applications should be received by the secretary of the committee thirty days prior to the committee's scheduled meeting date. Applications received after this time will be considered at the next meeting.

The chairperson will assign a committee member to present an objective treatise and recommendations concerning the proposed to new drug to the Executive Formulary Committee. The committee may decide to approve or deny the drug's inclusion, approve the drug on a trial basis, or postpone a decision until the following meeting of the committee. The committee, at its discretion, may approve a drug's inclusion in the Formulary subject to specific limitations (e.g., recommendation by qualified specialists or consultants) or as a reserve drug.

The specific limitations or guidelines for use of a reserve drug are stated in the formulary. A credentialed clinician may prescribe reserve drugs outside Formulary guidelines; however, such exceptions must be justified in the patient record and must be reviewed in routine facility audits of reserve drug utilization.
The following is a list of psychotropic drug dosages. These guidelines are not intended to establish rigid standards of treatment but to assist in monitoring the pharmacotherapy of the patient. Furthermore, guidelines for special patient populations are not intended to be absolute. For those medications that have a well established therapeutic serum range, the dosage should be based upon the desired serum range and response rather than a specific maximum administered daily dosage. These guidelines should be used in conjunction with sound clinical judgment and the prescriber’s experience.

In children and adolescents, metabolic and physiologic differences from adults should be considered when prescribing. Dosing based on body weight may be more accurate when treating these patients.

Different dosage requirements are usually necessary in the geriatric population. Since there is no standard definition for “geriatric”, the arbitrary age of 65 has been chosen to identify geriatric patients. In general, geriatric patient dosing guidelines should reflect a “go low, go slow” approach. Standard reference books should be consulted if needed for appropriate dosages when treating this population.

In general, when treating patients with developmental disabilities, a “go low, go slow” approach is recommended when increasing or decreasing psychotropic medication. The use of psychotropic medication can be therapeutic and empowering for a person with both mental retardation and a mental illness. The primary goal is to obtain an accurate diagnosis of behavioral and psychiatric symptoms so that the patients’ treatment is appropriate. A functional analysis by a psychologist is vital prior to starting any psychotropic medication except in an emergency. The U. S. Health Care Financing Administration now states that the least intrusive and most positive intervention to treat behavioral or psychiatric symptoms in a person with mental retardation may be the use of a psychotropic medication.

Prescribing psychotropic medication should be based on the following resources:

- The Department of State Health Services rule governing prescribing of psychoactive medications (Texas Administrative Code, Title 25, Part 1, Chapter 415, Subchapter A)
- Other useful resources that reflect current Standards of Care for the mentally ill include but are not limited to the following:

  Treatment Guidelines of Various Psychiatric Disorders
  Examples include:
  - APA Practice Guideline for Major Depressive Disorder in Adults. Am J Psychiatry 1993; 150 (supplement)
12a)

Psychotropic Medications and Developmental Disabilities: The International Consensus Handbook (Reiss and Aman, eds; AAMR, 202-387-1968)

Revised 25 October 2002
The purpose of the reserve drug class is to stimulate thought and promote care in prescribing. Discussions and interaction with other prescribers is strongly encouraged. When reserve status drugs are utilized, documentation of justification in the patient’s progress notes is mandated. To assist the prescriber, specific guidelines have been developed by the Executive Formulary Committee for use of each drug so classified. The guidelines will be used to audit the appropriate use of reserve drugs. Based on the audit results, continuing education will be developed and targeted as needed.

Serum concentrations are useful in the evaluation of therapy. However, they should only be considered as a guide to treatment, not the sole criterion for determination of dosage regimens.

The following anticonvulsants do not have an established therapeutic serum concentration range. Routine monitoring of these anticonvulsants is not warranted as serum concentrations cannot be correlated with clinical efficacy.

- Benzodiazepines
- Gabapentin
- Lamotrigine
- Levetiracetam
- Oxcarbazepine
- Tiagabine
- Topiramate
- Zonisamide

Section 415.108 of TDMHMR rules governing the use and maintenance of the *THHSC Drug Formulary* (25 TAC, Chapter 415, Subchapter C) describes the procedures for applying to have a drug added to the formulary, which are:

§415.108. **Applying to Have a Drug Added to the Formulary.**

(a) Any member of the Executive Formulary Committee, any service system component* practitioner, or any contract practitioner may apply to have a drug added to the *THHSC Drug Formulary* by completing the New Drug Application Form DF-1, referenced as Exhibit A in §415.112 of this title (relating to Exhibit) and including:

1. published articles in biomedical literature that substantiate the efficacy and safety of the proposed drug;
2. information on the advantages of the proposed drug compared with similar formulary drugs;
3. a list of formulary drugs that the proposed drug would replace or supplement; and
4. cost effectiveness data.

(b) Submitting the application.

1. If the person submitting the application is a facility** practitioner or a facility contract practitioner, then that practitioner submits the application to the facility’s pharmacy and therapeutics committee for approval. If the committee approves the application, then it forwards the application to the Executive Formulary Committee.

2. If the person submitting the application is a non-facility service system component practitioner or a non-facility service system component contract practitioner, then that practitioner submits the application to the component’s clinical/medical director or designee who determines if the application is appropriate and complete, and if so, forwards the application to the Executive Formulary Committee.

3. If the person completing the application is a member of the Executive Formulary Committee, then that person submits the application directly to Executive Formulary Committee.

(c) The Executive Formulary Committee considers the drug application and recommends:

1. approving the proposed drug’s inclusion and, if appropriate, approving audit criteria and recommending dosage guidelines;
2. denying the proposed drug’s inclusion;
3. approving the proposed drug on a trial basis for a specified period of time;
4. approving the proposed drug as a reserve drug, with guidelines; or
5. postponing the decision until a later meeting.

* The term “service system component” means a state hospital, state school, state center, or local authority (state-operated community services (SOCS) or community MHMR center).

** The term “facility” means a state hospital, state school, or state center.

The purpose of the Formulary is to ensure that the treatments available to THHSC consumers are consistent with need, effectiveness, risk, and cost. Exceptions to the Formulary are limited to the three categories listed below.

This request is for:
- □ an individual patient treatment course. Is this □ chronic or □ acute therapy?
- □ more than one patient/course of therapy. It is estimated that _______ patients will be treated with this drug. Is this □ chronic or □ acute therapy?

Reason for request:
- □ An illness for which no Formulary drug is as safe or effective.
- □ A trial supply in anticipation of application to Formulary.
- □ To prevent interruption of course of therapy established prior to admission.

Submission of a report does not constitute an admission that medical personnel or the product caused or contributed to the event.
ADVICE ABOUT VOLUNTARY REPORTING

Report experiences with:
- medications (drugs or biologics)
- medical devices (including in-vitro diagnostics)
- special nutritional products (dietary supplements, medical foods, infant formulas)
- other products regulated by FDA

Report SERIOUS adverse events. An event is serious when the patient outcome is:
- death
- life-threatening (real risk of dying)
- hospitalization (initial or prolonged)
- disability (significant, persistent or permanent)
- congenital anomaly
- required intervention to prevent permanent impairment or damage

Report even if:
- you're not certain the product caused the event
- you don't have all the details

Report product problems—quality, performance or safety concerns such as:
- suspected contamination
- questionable stability
- defective components
- poor packaging or labeling
- therapeutic failures

How to report:
- just fill in the sections that apply to your report
- use section C for all products except medical devices
- attach additional blank pages if needed
- use a separate form for each patient
- report either to FDA or the manufacturer (or both)

Important numbers:
- 1-800-FDA-0178 to FAX report
- 1-800-FDA-7737 to report by modem
- 1-800-FDA-1088 to report by phone or for more information
- 1-800-822-7967 for a VAERS form for vaccines

If your report involves a serious adverse event with a device and it occurred in a facility outside a doctor's office, that facility may be legally required to report to FDA and/or the manufacturer. Please notify the person in that facility who would handle such reporting.

Confidentiality: The patient's identity is held in strict confidence by FDA and protected to the fullest extent of the law. The reporter's identity, including the identity of a self-reporter, may be shared with the manufacturer unless requested otherwise. However, FDA will not disclose the reporter's identity in response to a request from the public, pursuant to the Freedom of Information Act.
