

YOU SAVED YOUR CHILD'S LIFE TODAY

Keeping them close keeps them safe from heatstroke.

A child left alone in a car can overheat five times faster than an adult. Just ask the 49 parents who lost children to heatstroke last year. It doesn't have to be very hot, either. Within 10 minutes, the interior temperature can rise 20 degrees, even with the window "cracked." Whether your child is sleeping or you're "just going to be a minute," don't risk their lives. Unlike a lot of parental worries, heat stroke is 100% avoidable.

Tell your friends. Tell your family. Tell your babysitter.

Keep kids safe.

Never Leave Your Child Alone
