

## Texas Department of State Health Services

# Texas Influenza Surveillance Report 2022-2023 Season/ 2022 MMWR Week 50

(December 11, 2022 – December 17, 2022) Report produced on 12/21/2022

### **Summary**

\*This report excludes COVID-19 data. For information about COVID-19 in Texas, please visit <a href="www.dshs.texas.gov/coronavirus">www.dshs.texas.gov/coronavirus</a>.
Compared to the previous week, the percentage of specimens testing positive for influenza reported by bospital laboratories has

Compared to the previous week, the percentage of specimens testing positive for influenza reported by hospital laboratories has decreased. The percentage of patient visits due to influenza-like illness (ILI) has decreased. Two influenza associated pediatric death were identified. Three influenza-associated institutional outbreaks were reported in school and long-term care facilities with no school closures reported.

Table 1: Summary of Texas Influenza (Flu) and Influenza-like Illness (ILI) Activity for the Current Week

| Texas Surveillance Component  | Change from<br>Previous Week | Current<br>Week | Previous Week <sup>†</sup> | Page of<br>Report |
|---|------------------------------|-----------------|----------------------------|-------------------|
| Statewide ILINet Activity Indicator assigned by CDC (intensity of influenza-like illness) | Stayed the Same              | Very High       | Very High                  | -                 |
| Percentage of specimens positive for influenza by hospital laboratories                   | ▼4.10%                       | 17.00%          | 21.10%                     | 1                 |
| Percentage of visits due to ILI (ILINet)  | ▼0.41%                       | 7.52%           | 7.93%                      | 4                 |
| Number of regions reporting increased flu/ILI activity                                    | ▼1                           | 2               | 3                          | 5                 |
| Number of regions reporting decreased flu/ILI activity                                    | <b>▲</b> 1                   | 5               | 4                          | 5                 |
| Number of variant/novel influenza infections  | No change                    | 0               | 0                          | 5                 |
| Number of ILI/influenza outbreaks   | Decreased                    | 3               | 4                          | 5                 |
| Number of pediatric influenza deaths  | Increased                    | 2               | 0                          | 6-7               |

<sup>†</sup>Data displayed have been updated since last week's flu report with any new reports received.

## **Laboratory Results**

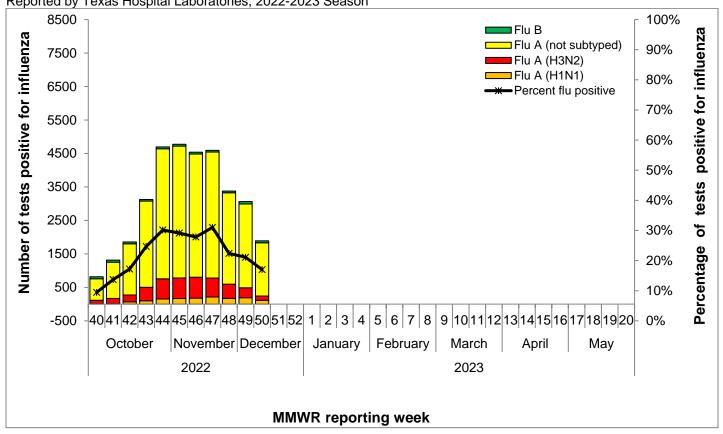

Influenza

Hospital laboratories across Texas voluntarily report influenza tests (antigen, culture, and PCR) to the National Respiratory and Enteric Virus Surveillance System (NREVSS). Providers throughout Texas also submit specimens for influenza testing (PCR) to Texas public health laboratories, including the Texas Department of State Health Services (DSHS) state laboratory in Austin and the nine Texas Laboratory Response Network (LRN) laboratories. The results reported by Texas NREVSS participants and public health laboratories for the current week are summarized in the two tables below. Additional influenza test results (rapid tests, culture, PCR) and ILI activity were reported from providers and public health departments throughout the state (see county map at the end of this report).

Table 2: Influenza Testing Performed by Texas Hospital Laboratories for the Current Week

|   | Week 50       | Season to Date<br>Week Ending:<br>December 17, 2022 |
|---|---------------|---|
| Number of labs reporting flu tests                          | 20            |   |
| Number of specimens tested                                  | 11117         | 145491  |
| Number of positive specimens (%)                            | 1890 (17.00%) | 34044 (23.40%)                                      |
| Percentage of total tests that were antigen detection tests | 34.67%        |   |
| Positive specimens by type/subtype                          | [n (%)]       |   |
| Influenza A   | 1832 (96.93%) | 33425 (98.18%)                                      |
| Subtyping performed   | 241 (13.16%)  | 5496 (16.44%)                                       |
| A (H1N1)  | 115 (47.72%)  | 1378 (25.07%)                                       |
| A (H3N2)  | 126 (52.28%)  | 4118 (74.93%)                                       |
| Subtyping not performed                                     | 1591 (86.84%) | 27929 (83.56%)                                      |
| Influenza B   | 58 (3.07%)    | 619 (1.82%)   |

| Table 3: Influenza Testing Performed by Texas Public Health | n Laboratories for the Current W | eek e   |

Figure 2: Number of Tests (PCR) Positive for Influenza by Type, Subtype, and Lineage Reported by Texas Public Health Laboratories, 2022 2023 Season

#### Other Respiratory Viruses

The NREVSS system collects information on a variety of respiratory viruses in addition to influenza including parainfluenza virus, respiratory syncytial virus (RSV), rhinovirus, human metapneumovirus (HMPV), seasonal coronavirus, and respiratory adenovirus. The results for the current week are summarized below.

Table 4: Non-Influenza Respiratory Virus Testing Performed by Texas NREVSS Laboratories for the Current Week

| Virus  | Number of<br>Laboratories<br>Testing | Tests<br>Performed | Positive<br>Tests | Percentage of Tests<br>Positive |
|--|--------------------------------------|--------------------|-------------------|---------------------------------|
| Adenovirus (respiratory)                                     | 15                                   | 2215               | 278               | 12.55%                          |
| HMPV   | 15                                   | 2315               | 179               | 7.73%                           |
| Parainfluenza virus  | 15                                   | 2315               | 162               | 7.00%                           |
| Rhino/enterovirus  | 16                                   | 2336               | 560               | 23.97%                          |
| RSV <sup>†</sup>   | 19                                   | 5949               | 362               | 6.09%                           |
| Seasonal coronavirus (does not include MERS-CoV or COVID-19) | 16                                   | 2336               | 130               | 5.57%                           |

<sup>†</sup> RSV tests displayed in the table are a combination of antigen detection, PCR, and culture tests. Some non-NREVSS reporters also contribute to the RSV data.

#### Antigenic Characterization

Antigenic characterization data for Texas specimens are not currently available. The DSHS Laboratory sends a representative sample of influenza viruses to the CDC throughout the flu season.

#### Antiviral Resistance

Antiviral resistance testing data for Texas specimens are not currently available.

<sup>\*</sup>Other denotes specimens with coinfections (i.e. one specimen was positive for both influenza A (H1N1) and influenza A (H3N2))

<sup>^</sup> Numbers and percentage may differ from the weekly RSV report. The weekly RSV report may be accessed at <a href="https://www.dshs.state.tx.us/RSV/disease/rsv-Data.aspx">https://www.dshs.state.tx.us/RSV/disease/rsv-Data.aspx</a>.

## U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet)

Table 5: Texas ILINet Reporting and Patient Visit Summary for the Current Week

|  | Week 50     |
|--|-------------|
| Number of providers reporting                      | 51          |
| Number of providers reporting patient visits       | 51          |
| Number (%) of providers with at least one ILI case | 48 (94.12%) |
| Percentage of all visits due to ILI                | 7.52%       |
| Texas ILINet baseline <sup>‡</sup> , 2022-2023     | 4.85%       |

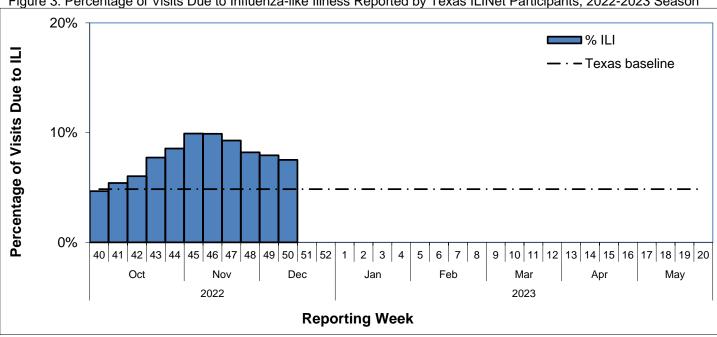

<sup>&</sup>lt;sup>‡</sup>The baseline is the mean percentage of patient visits for ILI during non-influenza weeks for the previous three seasons plus two standard deviations. A "non-influenza week" is defined as a week that accounted for less than 2% of the season's total number of specimens that tested positive for influenza

**Special Note**: The case definition was changed to capture respiratory pathogens causing illness, including CoVID-19, through the ILINet. The Influenza-like Illness (ILI) case definition for the 2022-2023 season is a patient with fever (≥ 100°F, 37.8°C) AND cough and/or sore throat. There is no longer a restriction on the cause.

Table 6: Percentage of Visits for Influenza-like Illness Reported by Texas ILINet Providers (as of 12/20/2022 12:15 PM)

| Week   | Providers | Num  | Number of ILI Cases by Age Group (Years) |       |       |     |            | Total           | 9/ 11 1 |
|--------|-----------|------|--|-------|-------|-----|------------|-----------------|---------|
| week   | Reporting | 0-4  | 5-24                                     | 25-49 | 50-64 | 65+ | (all ages) | <b>Patients</b> | % ILI   |
| 202240 | 59        | 894  | 1298                                     | 272   | 104   | 62  | 2630       | 56384           | 4.66%   |
| 202241 | 62        | 1101 | 1590                                     | 401   | 164   | 72  | 3328       | 61532           | 5.41%   |
| 202242 | 60        | 1113 | 1874                                     | 448   | 201   | 84  | 3720       | 61711           | 6.03%   |
| 202243 | 61        | 1460 | 2704                                     | 573   | 226   | 106 | 5069       | 65582           | 7.73%   |
| 202244 | 62        | 1569 | 3068                                     | 692   | 269   | 128 | 5726       | 66979           | 8.55%   |
| 202245 | 60        | 1405 | 2461                                     | 569   | 431   | 130 | 4996       | 50371           | 9.92%   |
| 202246 | 49        | 1106 | 1755                                     | 431   | 159   | 142 | 3593       | 36326           | 9.89%   |
| 202247 | 57        | 1431 | 1859                                     | 1051  | 375   | 208 | 4924       | 53073           | 9.28%   |
| 202248 | 56        | 1347 | 1870                                     | 1132  | 438   | 285 | 5072       | 61829           | 8.20%   |
| 202249 | 53        | 1165 | 1884                                     | 880   | 378   | 247 | 4554       | 57429           | 7.93%   |
| 202250 | 51        | 1071 | 1558                                     | 781   | 320   | 224 | 3954       | 52604           | 7.52%   |

Figure 3: Percentage of Visits Due to Influenza-like Illness Reported by Texas ILINet Participants, 2022-2023 Season

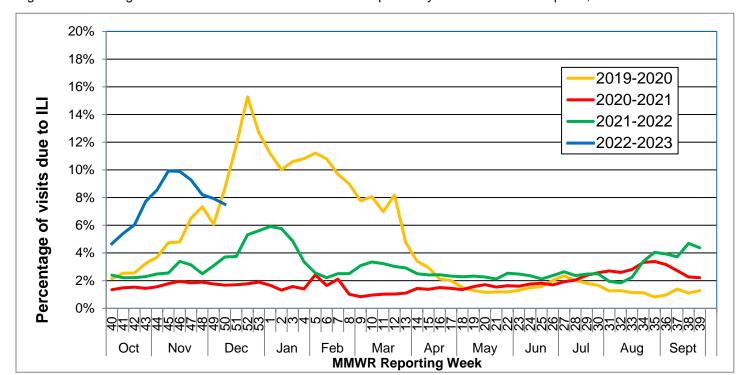

Figure 4: Percentage of Visits Due to Influenza-like Illness Reported by Texas ILINet Participants, 2019–2023 Seasons

Note: The 2020-2021 Flu Season contains MMWR week 202053. For graphical display compatibility with seasons containing 52 weeks, average values were generated using MMWR week 52 and 1 for Seasons: 2019-2020, 2021-2022, and 2022-23.

## **Reports from Health Service Regions**

Reports were received from all Health Service Regions (HSRs) during week 50.

Table 7: Influenza Activity compared to week 49 by Health Service Region (HSR)

| Influenza Activity Comparison |                             |
|-------------------------------|-----------------------------|
| Increased                     | 1 and 8                     |
| Same                          |                             |
| Decreased                     | 4/5N, 6/5S, 7, 9/10, and 11 |
| Unsure                        | 2/3                         |

### **Variant Influenza Viruses**

No variant or novel influenza viruses have been detected in Texas during the 2022-2023 season.

## **Institutional Outbreaks and School Closures**

3 newly identified institutional outbreaks were reported in week 50.

Newly identified outbreaks were reported from Public Health Region 1, 2/3, and 4/5N.

No school closures have been reported.

Outbreaks will continue to be monitored until closure. Health departments remain in communication with facilities experiencing these outbreaks to offer outbreak guidance, and aid when necessary.

## **P&I Mortality Surveillance Data**

\*Deaths due to COVID-19 may be classified as pneumonia deaths or influenza deaths (deaths due to "flu" or "flu-like illness") in the absence of positive SARS-CoV-2 test results. Pneumonia and influenza (P&I) death data are obtained from death certificates of Texas residents whose underlying or contributing cause(s) of death is reported as pneumonia or influenza. P&I deaths are identified based on ICD-10 multiple cause of death codes. P&I deaths are based on ICD-10 pneumonia and influenza mortality codes.

One thousand seven hundred and ninety-nine (1799) P&I deaths have been reported in Texas during the 2022-2023 influenza season.

Table 8: Texas P&I Deaths Occurring October 2, 2022- December 17, 2022\* by Age

| Age Category | Number of P&I       | Mortality Rate |
|--------------|---------------------|----------------|
| (years)      | Deaths <sup>+</sup> | (per 100,000)  |
| 0 - 4        | 10                  | 0.45           |
| 5 - 17       | <10                 | -              |
| 18 - 49      | 123                 | 0.90           |
| 50 - 64      | 287                 | 5.45           |
| 65 +         | 1373                | 31.13          |
| Overall      | 1799                | 5.77           |

<sup>\*</sup>NOTE: Data are provisional and subject to change, errors, and duplicates

Table 9: Texas P&I Deaths Occurring October 2, 2022– December 17, 2022\* by Health Service Region (HSR)

| HSR     | Number of P&I<br>Deaths+ | Mortality Rate (per<br>100,000) |
|---------|--------------------------|---------------------------------|
| 1       | 81                       | 8.43                            |

#### **Influenza-Associated Pediatric Mortality**

One mortality has been reported for week 50. One mortality has been reported for week 43.

The week 50 case was identified as a nine-month-old female with underlying health conditions. Patient tested RT-PCR positive for Influenza A (H3). Texas DSHS is awaiting further information and investigation.

The week 43 case was identified in October and required extensive review before officially being classified as an influenza-associated pediatric mortality. This case was a nine-month-old female with no underlying health conditions. Patent tested rapid test positive for Influenza B. This case has now officially been reported for week 44 and updated in Table 10 below to reflect the month of death.

<u>Seven</u> pediatric mortalities have been reported in Texas during the 2022-2023 influenza season. Cases of influenza-associated pediatric mortality (children <18 years of age) are reportable year-round by law in Texas.

<sup>+</sup> If the cell count is less than 10, the number of P&I deaths is suppressed and <10 is written in the cell.

<sup>+</sup> If the cell count is less than 10, the number of P&I deaths is suppressed and <10 is written in the cell.

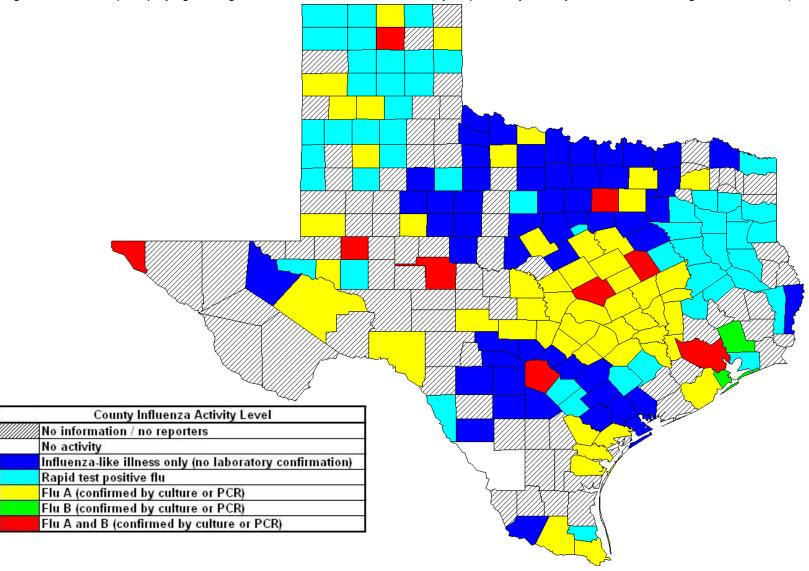

Table 10: Influenza-Associated Pediatric Deaths Reported in Texas during the 2022-2023 Season

| Month of<br>Pediatric<br>Death | Influenza<br>A (H1N1) | Influenza<br>A (H3N2) | Influenza<br>A (Not<br>Subtyped) | Influenza<br>B | Influenza, Not<br>Typed / Not<br>Differentiated | Influenza virus<br>co-infection: A<br>(not subtyped)<br>and B | Total, All<br>Influenza<br>Types /<br>Subtypes |
|--------------------------------|-----------------------|-----------------------|----------------------------------|----------------|---|---|--|
| 2022                           |                       |                       |                                  |                |   |   |  |
| October                        | 0                     | 2                     | 0                                | 1              | 0   | 0   | 3  |
| November                       | 0                     | 2                     | 0                                | 0              | 0   | 0   | 2  |
| December                       | 0                     | 1                     | 1                                | 0              | 0   | 0   | 2  |
| Total*                         | 0                     | 5                     | 1                                | 1              | 0   | 0   | 7  |

<sup>\*</sup>Total count of typed cases may be adjusted as lab testing and case investigation is completed.

## **Statewide Influenza Activity Map**

Figure 5: Texas Map Displaying the Highest Level of Influenza or ILI Activity Reported by County for the Week Ending Dec. 17, 2022 (MMWR Week 50)

Please note: The majority of influenza cases are not reportable by law in Texas. This map contains data from sentinel sites and only displays influenza and ILI cases that were reported to public health. Positive laboratory results are reported according to specimen collection date, or date received in the laboratory if the former is unknown.

## **Texas Influenza Surveillance Components and Measures**

Activity codes (see http://www.cdc.gov/flu/weekly/overview.htm)

Statewide influenza activity level

A code reported weekly by states and territories to CDC indicating the geographic spread of influenza in the state. Levels are no activity, sporadic, local, regional, and widespread.

**ILINet Activity Indicator** 

A statewide level of influenza-like illness intensity (on a scale of 1-10, with 1 being the lowest level) assigned to each state weekly by CDC based on data reported through ILINet.

#### Morbidity

Novel/variant influenza

Thorough investigations are performed on all cases of novel/variant influenza. This condition is reportable by law in Texas.

#### Texas II INet

Providers voluntarily report weekly to CDC's ILINet system on the number of outpatient visits for ILI and total outpatient visits. Providers may submit up to 5 specimens per month for influenza testing. See <a href="http://www.dshs.state.tx.us/idcu/disease/influenza/surveillance/ILINet/">http://www.dshs.state.tx.us/idcu/disease/influenza/surveillance/ILINet/</a> for information on how to become an ILINet provider.

#### ILI activity

Non-ILINet providers report ILI or influenza data weekly to local or regional health departments.

#### Outbreaks

Healthcare, schools, childcare, and correctional facilities report ILI and influenza outbreaks to health departments in Texas. This condition is reportable by law in Texas.

#### Mortality

Pneumonia and Influenza (P&I) Mortality Surveillance

The DSHS Vital Statistics Unit collects death certificate information for all deaths on Texas residents from various partners such as funeral homes and local registrars around the state. The death certificates are then sent to the National Center for Health Statistics (NCHS) where the cause of death and underlying causes of death on the death certificates are coded with ICD-10 mortality codes. Once death certificates are coded, the information is sent back to DSHS Center for Health Statistics (CHS). CHS produces a Weekly Pneumonia and Influenza (P&I) Death Report and sends it to the State Influenza Surveillance Coordinator for inclusion in the Texas Weekly Flu Report. P&I deaths are identified based on ICD-10 multiple cause of death codes, and in particular, pneumonia and influenza mortality codes. Delays inherent in death reporting and coding practices may cause the number of reported P&I deaths to vary considerably each week.

#### Influenza-associated pediatric deaths

Deaths that are associated with influenza in children < 18 years of age are reported to health departments in Texas. *This condition is reportable by law in Texas*. http://www.dshs.state.tx.us/idcu/disease/IAPM/

#### Laboratory

**DSHS** Austin laboratory

Providers voluntarily submit specimens to the DSHS Austin laboratory for influenza PCR testing throughout the season. Providers sign up for this program through their local health departments.

Laboratory Response Network (LRN) laboratories

Providers voluntarily submit specimens to one of the 9 Texas LRNs for influenza PCR testing throughout the season. Providers sign up for this program through their local health departments.

**NREVSS** 

Laboratories voluntarily report influenza and other respiratory virus data weekly through the CDC's online NREVSS reporting system.

Laboratories sign up for this program by contacting DSHS. <a href="https://www.cdc.gov/surveillance/nrevss/">https://www.cdc.gov/surveillance/nrevss/</a>
