Data Years Needed:

Select this box if you would like the data for each year individually, otherwise the request data will be sent in aggregate for all years.

The most current year available is 2021. Please note that the methodology changed starting in 2011. If data years are combined for analysis, then 2000-2010 should be grouped together, and 2011-2021 should be grouped together. No more than five years of data may be combined.

Geographic Area(s) Needed:

Statewide

PHRs

larger MSAs

The Texas Behavior Risk Factor Surveillance System (BRFSS) is a state-level survey. Results can also be broken out by Public Health Regions (PHRs), larger Metropolitan Statistical Areas (MSAs), and some larger counties. Estimated prevalence rates are not available for all counties or zip codes.

Prevalence Estimates Needed:

Select this box if you would like the data broken out by demographics. Demographic categories include sex, race/ethnicity, age, educational attainment, income, marital status, employment status, health insurance, disability status, and sexual orientation.

The Community Assessment Team (CAT) does not report or interpret estimates based upon a denominator of fewer than 50 respondents (unweighted sample size) due to decreased statistical reliability.
